FISHES AND OTHER AQUATIC SPECIES IN BYZANTINE LITERATURE
CLASSIFICATION, TERMINOLOGY AND SCIENTIFIC NAMES

Fish was a substantial food item during antiquity and the Middle Ages for the people living around the Mediterranean area, as it is considered of high nutritional value¹. Fishes are mentioned in respective Byzantine texts more often than any other foodstuff. After Christianity was predominated and the rules of the new religion were established, the statute of fasting contributed determinatively to the increased consumption of fish and aquatic species in general, since the basic criterion for defining the foods allowed for eating was the content in blood. In some fasting days, such as the Lent of Christmas,

the Transfiguration feast day on August 6 that is included in the fasting period for the Assumption of Virgin Mary on August 15, or the feast of the Annunciation on March 25 that is included in the Lent of Easter, eating of fish is provided². In addition, the consumption of all the other sea-food, except of fish, is allowed in all the fasting periods. This might be concluded from the absence of any relevant prohibition in the extant typologies of monasteries and from the oral evidence expressed by modern monks, whose monasteries have adopted the Byzantine tradition. During also the breaking of fasting, fish takes the place of meat in the monastic meals, if its consumption is prohibited by the rules of the monastery³.

Main sources are texts dealing with nutrition, written by Byzantine doctors and *Geoponika*⁴ that provide guidelines for fishing methods of

various fish species⁵. It seems that Byzantine doctors considered fish, in majority and most of the other aquatic animals as food of high nutritional value providing substantial benefits to human health⁶. Byzantine doctors adopted Galen's contemplation on the link between medicine and nutrition: *Ίατρικὴν δὲ λέγειν ἢ ὑγιεινὴν οὐ διοίσει πρὸς γε τὰ παρόντα. περὶ τούτων οὖν εἰρήσεται (...), ὅσα συνεχῶς ἐσθίουσιν οἱ ἄνθρωποι*⁷. Moreover, the products of fish, shell-fish and molluscs are used as raw materials for the preparation of pharmaceutical products in the composition of the prescriptions proposed in these medical texts⁸. However, information in regard to the names of fishes and aquatic species are reported in various

presentation of the fish and the various aquatic species terminology as reported in the Byzantine sources and the identification of each species, correspondingly, with its current scientific name. The identification is based on the categorization provided by some of the sources and moreover on parameters related to the physiology of the species, as it is described in modern ichthyology¹⁵. The etymological affinity between the names of most fishes and other aquatic species reported in the Byzantine sources, with the corresponding common name in the Modern Greek language contributed significantly to the outcome of the research¹⁶.

15. BINI, *Catalogo dei nomi dei*

Fishes

In the texts of the Byzantine doctors, fishes are classified in categories based on their physiology and origin, because, according to the writers, these are determining factors for the nutritional value of each species.

In regard to their physiology, fishes are distinguished as *σκληρόσαρκοι*¹⁷, *σκληρόσαρκοι πλατεῖς*, *μαλακόσαρκοι* or *ἀπαλόσαρκοι*¹⁸ and *μεσαῖοι*. In regard to their origin, they are distinguished as *αἰγιαλώδεις* or

pesci, dei molluschi, e dei crostacei di importanza commerciale nel Mediterraneo, Rome 1965. P. ΟΙΚΟΝΟΜΙΔΗΣ, Catalogue of Hellenic Fishes, *Hellenic Oceanology and Limnology*, 11 (1973) 421-599. A. αἰγιαλίνοι¹⁹, πετραῖοι²⁰, πελάγιοι²¹, θαλάσσιοι²², ποτάμιοι and λιμναῖοι²³. As σκληρόσαρκοι are characterised the fishes with tough flesh. The term μαλακόσαρκοι or ἀπαλόσαρκοι characterises the fish and other aquatic species with tender flesh. The separation of fishes in σκληρόσαρκοι and μαλακόσαρκοι in πελάγιοι, αἰγιαλώδεις and πετραῖοι, was first described by Aristoteles.

Σκληρόσαρκοι

Other aquatic species

The aquatic animals, except of fishes, included in the Byzantine medical texts, are categorized according to the same method and criteria, as those described for fishes¹²⁷:

Ὀστρακόδεσμα or ὄστρακοειδῆ or ὄστρακα (ἀπαλόσαρκα or μαλακόσαρκα and σκληρόσαρκα): SN: *Ostracodermus* / *Ostraca*. Species enclosed in hard shell. (*Oribasii Collectionum*, 2.53: Κήρυκας καὶ πορφύρας ὄστρεά τε καὶ χήμας ὅσα τε ἄλλα τοιαῦτα ὄστρακόδεσμα

127. In order to search the evolution of the names of the various species and to identify the corresponding scientific name the following references were used: J. PLANCUS, *De conchis minus notis liber. Cui accessit specimen aestus reciproci maris superi ad litus portumque Arimini*, Venise 1854. J. E. MORTON, *Molluscs*, London 1958. G. A special distinction among aquatic animals is noted in *Λόγος εἰς τὴν Ἑξαήμερον* written by Basil of Caesarea¹⁵⁴. This work is written mainly with an instructive style; however it includes, among others, detailed descriptions of many aquatic organisms. The content of the chapter that refers to these species is an analytical interpretation of the passage of Genesis: Ἐξαγαγέτω τὰ ὕδατα ἐρπετὰ ψυχῶν ζωσῶν¹⁵⁵. Primarily, the term ἐρπετὰ is interpreted. With this term, the Hebrew phrase *sheh'-rets haw-yaw neh'-fesh* is rendered in the Septuagint¹⁵⁶. According to Basil, the meaning of this word refers to all the organisms that crawl and live in the water: Πᾶν τὸ νηκτικὸν κἄν τῇ ἐπιφανείᾳ τοῦ ὕδατος τέμνη τὸ ὕδωρ, τῆς

152. *LSJ*⁹, entries *σήπειον*, *σηπία*, *σηπιάς*, *σήπιον*.

τῶν ἐρπηστικῶν ἐστὶ φύσεως, ἐπισυρόμενον τῷ τοῦ ὕδατος σώματι¹⁵⁷. This explanation is related to the term *reh'-mes shawm* that describes the aquatic creatures in the 103rd psalm¹⁵⁸.

The information about fishes and other aquatic species provided in *Λόγος εἰς τὴν Ἑξαήμερον* concerns their physiology, reproduction, type of food and place of origin. With the general term *ἰχθεῖς* or *νηκτικὰ ἐρπετά*¹⁵⁹, all the aquatic animals are described, that according to Basil they are characterised as:

Ἵπόποδα: SN: *Gasteropoda*. The term *ὑπόποδα* is mentioned for the first time by (pseudo-)Aristoteles, *Περὶ πνεύματος* 485a 21 (ed. W. JAEGGER, *Aristotelis de animalium motione et de animalium incessu. Ps.-Aristotelis de spiritu libellus*, Leipzig 1913, 54: Τὰ δὲ ὄστρακόδεσμα τῶν ἐνύδρων ὑπόποδα διὰ τὸ βάρος). The category *ὑπόποδα* identifies with a term of aquatic species that is used today to classify the large category of *gasteropoda* or *gastropoda*. *Gasteropoda* are aquatic animals, vertebrates and invertebrates, with or without shell, similar to amphibia, living in water and land. Actually, their name originates from the anatomical position of their legs that are fin-shaped and grow from the abdominal segment of their body. See and *Georgios Pachymeres*, 44.17-20: Τὰ μὲν γὰρ ὑπόποδα, ἐπειδὴ ἐν ἑκατέρῳ τῶν ἀντικειμένων σκελῶν ἐν μέρει ἴσταται καὶ τὸ βάρος ἴσχει, ἀναγκαῖον ὑστέρου προβαίνοντος θατέρου ποιεῖσθαι κάμπιν¹⁶⁰.

Ἀμφίβια: SN: *Amphibia* (*HesLex*, entry *ἀμφίβια ζῶα* [= τὰ ἐνύδρα καὶ χερσαῖα], *ἀμφίβιον* [= ἐν γῆ καὶ ὕδατι ζῆν δυνάμενον]). (*Georgios*

160. *Lampe*, entry *ὑπόποδος*.

Pachymeres, 24.22: (...) συμβέβηκεν αὐτῷ πεζῷ ὄντι ζῆν ἰχθύων βίον)¹⁶¹. In the category ὑπόποδα - ἀμφίβια, except of φῶκαι¹⁶², ποτάμιοι ἵπποι¹⁶³ and καρκῖνοι¹⁶⁴, Basil of Caesarea classifies the following species:

Κροκόδειλοι SN: *Crocodylus* (*HesLex. SudLex. ZonLex*, entry κροκόδειλος. Alexander von Tralles, 1.405. Georgios Pachymeres, 24.18-22)¹⁶⁵.

Βάτραχοι: SN: *Ceratophrys Ornata* (*ZonLex*, entry βάτραχος. Θεοφύλακτος Σιμοκάττης, *Διάλογος*, 19. *Ptochoprodromos*, IV 106). Besides the known amphibious animal, mainly in former sources, a species of ray is described with the same name. See: Aristoteles, *Ἱστορίαι περὶ τῶν ζώων* 540b 17 (ed. P. LOUIS, *Aristote, Histoire des animaux*, v. 2, Paris 1968, 7): Σελάχη δ' ἐστὶ τὰ τ' εἰρημμένα καὶ βοῦς καὶ λάμια καὶ ἀετὸς καὶ νάρκη καὶ βάτραχος καὶ πάντα τὰ γαλεώδη. See and: *Aelian on the characteristics of animals*, 13.5: Βάτραχος δὲ θαλάσσιος τίττει κατὰ τοὺς ὄρνιθας ᾧδὸν καὶ οὔτος. It is not possible to express a certain opinion, if the rare references in the Byzantine texts about the consumption of βάτραχοι (βαθρακοί), concern the amphibious animal or the fish species¹⁶⁶.

Κήτη¹⁶⁷ - Ζωοτόκα¹⁶⁸: The distinction between ζωοτόκα (*viviparous*) and ὠοτόκα (*oviparous*) was first made by Aristoteles, *Ἱστορίαι περὶ τῶν ζώων* 489a 35 (ed. P. LOUIS, *Aristote, Histoire des animaux*, v. 1, Paris 1964, 10): Καὶ τὰ μὲν ζωοτόκα τὰ δ' ὠοτόκα τὰ δὲ σκωληκοτόκα, ζωοτόκα μὲν οἶον ἄνθρωπος καὶ ἵππος καὶ φώκη καὶ τὰ ἄλλα ὅσα ἔχει τρίχας. See and Georgios of Pisidia, *Esamerone*, 1020. In κήτη - ζωοτόκα, except of

168. See *OEGD*, entry *viviparous*.

φῶκαι, δελφίνες¹⁶⁹ and νάρκαι¹⁷⁰, the category of σελάχη is classified¹⁷¹. (*HesLex*, entries σελάχιον. (...) ὅσα ἄποδα ζωοτοκεῖ and σελάχη, σελαχίας. *SudLex*, entry σελάχιον. Ἰχθύδιον, ὃ μόνον ζωοτοκεῖ. εἴρηται δὲ ἀπὸ τοῦ ἔσω λεχώζειν). Based on the morphology and physiology, skates, rays and some kinds of sharks are characterised as σελάχη and they are included in the families of *Rajidae*, *Rhinobatidae* and *Dasyatidae*. The species also of τούρπαινα (νάρκη), βάτος, κίθαρος, ῥίνα, and γλαῦκος, mentioned above, belong to the same category¹⁷². There are the following 17 accepted SN for the species of σελάχη: *Dasyatis Centroura*, *Dipturus Batis*, *Dipturus Oxyrinchus*, *Leucorajia Circularis*, *Leucorajia Fullonica*, *Leucorajia Naevus*, *Pteroplatytrygon Violacea*, *Rajia Asterias*, *Rajia Brachyura*, *Rajia Clavata*, *Rajia Miraletus*, *Rajia Montagu*, *Rajia Polystigma*, *Rajia Radula*, *Rajia Undulata*, *Rhinobatos Rhinobatos*, *Rostroraja Alba* (see www.fishbase.org).

Λεπτοὶ ἰχθεῖς¹⁷³ - ὠοτόκα¹⁷⁴: This category, according to Basil of Caesarea, includes the subcategory of λεπιδωτὰ¹⁷⁵ and φολιδωτὰ¹⁷⁶ and ἐν οἷς ἔστι καὶ ἐν οἷς οὐκ ἔστι πτερόγυια¹⁷⁷.

The term λεπιδωτὰ characterises the fishes with scales and the term φολιδωτὰ the fishes with lamellae. The distinction between λεπιδωτὰ and φολιδωτὰ was made by Aristotle too. He also notes that the aquatic viviparous are characterised as λεπιδωτὰ and the oviparous as φολιδωτὰ. See Aristoteles, *Ἱστορίαι περὶ τῶν ζώων* 505a 23-25 (ed. P. LOUIS, *Aristote, Histoire des animaux*, v. 1, Paris 1964, 56): Ἔτι δὲ πρὸς τὰλλα ζῶα οἱ ἰχθύες διαφέρουσι πρὸς τῇ διαφορᾷ τῇ περὶ τὰ βράγχια οὔτε γὰρ ὥσπερ τῶν πεζῶν ὅσα ζωοτόκα ἔχει τρίχας, οὔθ' ὥσπερ ἔνια τῶν ὠοτοκούντων τετραπόδων φολίδας, οὔθ' ὡς τὸ τῶν ὀρνέων γένος πτερωτόν, ἀλλ' οἱ μὲν πλεῖστοι αὐτῶν λεπιδωτοὶ εἰσιν, ὀλίγοι δὲ τινες τραχεῖς, ἐλάχιστον

Ὅστρακόδεσμα: κόγχαι, κτένες, κοχλῖαι θαλάσσιοι, στρόμβοι, ὄστρεα.

Μαλακόστρακα: πολύποδες, σπηΐαι.

Ποτάμια καὶ λιμναῖα ἰοβόλα¹⁷⁸: δράκοντες, μύραιναι, ἐγγέλυες.

Πελάγια, αἰγιαλώδη, βύθια¹⁷⁹, πετρώδη, ἀγελαῖα¹⁸⁰, σποραδικά¹⁸¹.

Based on the type of food: Οἱ ἰλύϊ τρεφόμενοι¹⁸², οἱ φύκοις τρεφόμενοι¹⁸³, οἱ βοτάναις ἐντρεφεόμεναις τῷ ὕδατι τρεφόμενοι¹⁸⁴, οἱ ἀλληλοφάγοι¹⁸⁵.

Based on the place of origin: οἱ τὴν Ἰνδικὴν ἀλιεύοντες θάλασσαν¹⁸⁶, οἱ τὸν Αἰγύπτιον ἀγρεύοντες κόλπον¹⁸⁷, νησιῶται¹⁸⁸, Μαυροῦσιοι¹⁸⁹.

Conclusions

More than a hundred ten names of fishes and about thirty names of other aquatic organisms are found in Byzantine literature. Most of the information is retrieved by the medical texts, whose writers are dealing with food and nutrition.

178. *OEGD*, entry *poisonous*.

182. Fishes fed with mud. *LSJ*⁹, entry *ἰλύς*. *OGED*, entry *βοῦρκος, λάσπη*.

183. Fishes fed with seaweed. See footnote 94.

184. Fishes fed with plants growing in the sea.

185. *OGED*, entry *ἀλληλοφάγομα*. Fishes fed with other fishes.

186. Fishes originated from the Indian Ocean.

187. Fishes originated from the Red Sea that in some references is called Egyptian Gulf. See and *Oribasii Collectionum*, 2.58.

188. Fishes originated from the islands.

189. Fishes originated from *Μαυροουσία*, an area in the northwest of Africa that today includes the country of Mavritania.

The criteria for their classification vary according to the category of each source. In most of the medical texts of the early Byzantine period (e. g. Oribasius, Aetius, Paul of Aegina, Alexander of Tralles) the comparative evaluation of the nutritional value of the species was considered as basic criterion. In the texts of the later writers (e. g. Symeon Seth, Hierophilus Philosopher) foodstuffs are cited in alphabetical order and among them fishes and other aquatic animals. In the texts with instructive style (e. g. Basil of Caesarea, Georgios of Pisidia, *Physiologos*,) and in the manuals of natural history (e. g. Theophylactos Simocattes, *Excerptorum Constantini de natura animalium*, Manuel Philes) the classification of the species is alphabetical. In addition, the criterion corresponding to the meaning attributed by the writers in accordance with the symbolic role of the species described is used.

During the early Byzantine period and especially in the texts by Oribasius, Basil of Caesarea, Theophylactos Simocattes, Aetius, Paul of Aegina, Alexander of Tralles, there are more references to the names of fishes, testacea, crustaceans, molluscs and shells than in the other time periods. Moreover, special information is noted by the writers about the fishes and the aquatic species living in distant seas and rivers such as the Persian Gulf, the Red Sea or the Indian River. In the course of the time, these references are limited, as the interest of the writers was focused rather to the species connected mainly with food and consumed in the every day life of the Byzantine people or they were used as raw materials in the manufacturing of household stuff, musical instruments, weapons, dyes, medicines and cosmetics. It is characteristic that the anonymous writers of *Geoponica*, *Excerptorum Constantini de natura animalium*, as well as Symeon Seth, and Manouel Philes, indicate in the *Προοίμια* of their works their preference to refer on information concerning the every day life.

FISHES AND OTHER AQUATIC SPECIES IN BYZANTINE LITERATURE
CLASSIFICATION, TERMINOLOGY AND SCIENTIFIC NAMES

Fishes and other aquatic species were substantial food in the every day life of Byzantine people. The predomination of Christianity contributed to the increased consumption of fish and other seafood in comparison to the meat of land animals and chicken. More than a hundred ten names of fishes and about thirty names of other aquatic organisms are found in Byzantine literature. Most frequent references are found in the medical texts of the Byzantine doctors, where, fishes are classified in categories depending on their physiology and origin, because, according to the writers, these are determining factors for the evaluation of the nutritional value of each species.

The purpose of this study is to present the terminology of the fishes and the various aquatic organisms that are found in the Byzantine sources and to identify each species with its current scientific name.
