## JEWELLERY, ITEMS OF PRIVATE DEVOTION AND DRESS ACCESSORIES FROM THE EPANO KASTRO OF ANDROS (13TH-16TH CENTURIES)

*To Επάνω Κάστρο βρίσκεται στα νοτιοανατολικά της Ανδρου και κατασκευάστηκε από τους Βενετούς επινομίαρχους του νησιού μετά το 1205. Το Εθνικό και Καποδιστριακό Πανεπιστήμιο Αθηνών διεξήγαγε συστηματική ανασκαφή σε επίκαιρα σημεία της καστροπολιτείας στο διάστημα 2004-2010. Δακτυλίδια, αντικείμενα ιδιωτικής ευλάβειας και στοιχεία ένδυσης χρονολογούνται στην περίοδο της βενετοκρατίας (1205-1566) και υποδηλώνουν την ύπαρξη μιας επαρχιακής κοινωνίας που δεν αγνοούσε τους κύριους ενδιματολογικούς κώδικες του ύστερου Μεσαίωνα.*

*Epano Kastro is located in the southeast of the island of Andros and was built by the Venetian sovereigns after 1205. During the period 2004-2010 the National and Kapodistrian University of Athens conducted excavations at strategic parts of the castle. Rings, items of private devotion and dress accessories from the excavation at Epano Kastro, most of which date back to the Venetian occupation (1205-1566), suggest the existence of a provincial society that was aware of the main dress codes of the Late Middle Ages.*

### Λέξεις κλειδιά

Βενετοκρατία, Ανδρος, δακτυλίδια, σταυρός-εγκόλπιο, ευλογία μύρου, πόρπες, διακοσμητικά καρφίδια.

### Keywords

*Venetian period; Andros; rings; pectoral cross; pilgrim's ampulla; buckles; cloth revetments.*

The Epano Kastro (Upper Castle), also known as Kastro Faneromenis<sup>1</sup>, is located in the southeastern part of the island of Andros, the second largest island of the Cyclades, and overlooks the wider region of the fertile Korthi Valley, where the Byzantine settlement of Ano Korthi is also located. Moreover, it has visual contact with the castle

of Chora, or Kato Kastro (Lower Castle), to the north.

The Epano Kastro is built on a long, narrow rocky plateau (450×30-95 m.) at an altitude of 560 m. (Fig. 1). Its first settlement phase is linked to the arrival of the Venetians to the Aegean, i.e. it dates from the early 13th century. Together with the Kato Kastro

\* Eleni Barmparitsa, Postdoctoral Researcher, University of the Peloponnese, lenabarmparitsa@gmail.com

\*\* I would like to express my gratitude to Assistant Professor of the National and Kapodistrian University of Athens, Dr Eleni Deliyanni-Doris, for the opportunity she offered me to attend the excavation in Epano Kastro and to study the metal finds. The study was carried out during post-doctoral research held at the University of the Peloponnese, under the supervision of Assistant Professor Maria Xanthopoulou. The research is funded by the State Scholarship Foundation of Greece, through the program «Enhancement of Post-Doctoral Researchers», NSRF 2014-2020. I express my gratitude to the Director of the Ephorate of Antiquities of Cyclades, Dr Demetrios

Athanasiou, for the permission to study the metal finds. Ms Marina Lykiardopoulou worked on the conservation of the archaeological material. Ms Ioanna Syrigou did the English translation.

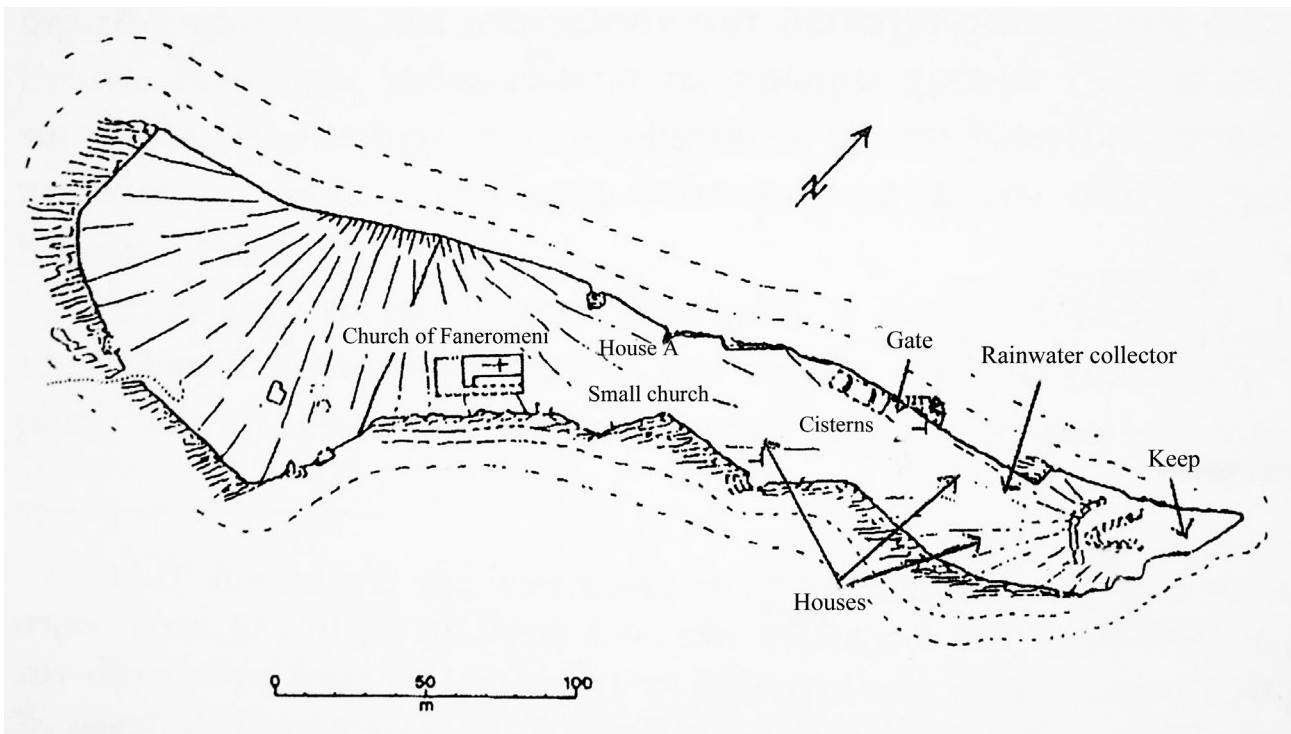

Fig. 2. Andros, Epano Kastro, drawing with the main excavation sites.

The basic infrastructure of the Epano Kastro dates to the early years of Venetian rule and consists of: the walls, the keep<sup>4</sup>, a group of two neighbouring public cisterns<sup>5</sup> and a rainwater collection tank for their supply<sup>6</sup> (Fig. 2).

Within its walls, there used to be a well-organized settlement with narrow streets and numerous residences. The present church of Faneromeni, to which the main street led, starting from the gate on the northwestern side of the walls, was probably the main church erected by the Venetians<sup>7</sup>. On the same main street, southeast of the church of Faneromeni, lies a smaller church<sup>8</sup>.

and Kapodistrian University of Athens and headed by Assistant Professor Eleni Deliyianni-Doris<sup>9</sup>. Part of the settlement to the east of the church of Faneromeni up to the castle keep, which included an extended residential center along with the small church, the cistern complex and the rainwater collector, was investigated (Fig. 2). In addition, the construction characteristics of the walls were documented, the entrance gate was located and a survey was carried out in the wider area around the castle, which recorded eight small churches and the infrastructure of agropastoral activity (cottage, pens, threshing floors, kilns) were recorded.

The excavation revealed that by the end of the Venetian rule, around 1566, the settlement had taken its present form to a large extent. Its population is estimated at several hundred inhabitants, giving it the character of a small citadel, as well as a surveillance and defense-organization post for the wider region. This assessment is supported by the fact that the term "Apanokastranoi" refers to the inhabitants of a broader region who, in times of danger, could probably take refuge in the castle<sup>10</sup>.

Life in the castle seems to have continued after the end of the Venetian rule on the island, until around the end of the 17th century. At that time, the conditions prevailing in the Cyclades enabled the local population, which had been ravaged by pirate raids and repeated Ottoman-Venetian conflicts, to settle down in the surrounding rural communities with a sufficient degree of safety<sup>11</sup>.

Approximately 26 jewellery items, objects of private devotion and dress accessories were found during

the research carried out at the Epano Kastro<sup>12</sup>. Based on the archaeological context and mainly on the subsidiary monetary finds, most of them date back to the period of Venetian rule on the island (1205-1566). Most of them are made of copper alloys.

Along the northern part of the walls of the Epano Kastro lies the complex of the two large cisterns, which stretch along a west-to-east axis and are built from local schist with strong binding lime mortar. The western cistern was backfilled using materials from the nearby medieval settlement in order to be reused as a residential area or a workshop at a later time, probably from the end of the 16th century onwards. Among other things retrieved from this cistern were five rings, a pilgrim's ampulla, a large iron buckle and a circular mount. The most recent find from the backfill dates back to 1414-1423 and is a tornesello of the Doge Mocenigo Gradenigo<sup>13</sup>.

## Jewellery

A men's gold ring (2004-M2) adorned with a double-headed eagle, comes from the western cistern's backfill and is of great interest (diameter: 2.2 cm, bezel: 1×0.9 cm) (Fig. 3).

The double-headed eagle, a well-known ancient symbol in the Near East, was used by the court of Constantinople from the late 12th century and became an emblem of the Palaiologos family as well as a symbol of imperial domination. At the same time, it was adopted by several powerful families that were associated with the Palaiologos family in various ways<sup>14</sup>. In addition,

occasionally used the double-headed eagle as a symbol of imperial power<sup>16</sup>. In the Late Middle Ages, due to the influence of the Byzantine court, the symbol spread throughout Western Europe as a coat of arms to a limited extent<sup>17</sup>, while it was also used in Western art works destined for recipients of Greek origin or for members of Hellenophile circles<sup>18</sup>. By the end of the Middle Ages, the symbol's use had been gradually standardised and was used in objects destined for the West or for Greek and Latin buyers<sup>19</sup>.

The double-headed eagle on the ring from Andros morphologically corresponds to a type whose most important specimen is found on the so-called ring of Queen Theodora, unearthed from a grave in the Banjska monastery in Kosovo<sup>20</sup>. The ring from Kosovo, dating back to the early 14th century, appears to be, in terms of style and fabrication, the work of a goldsmith who was familiar with the Italian Gothic style, probably that of Venice<sup>21</sup>. The double-headed eagle on the Andros ring, made with an engraving technique, is disproportionate and rendered schematically and could therefore be considered the work of a provincial workshop, familiar with the Venetian Gothic style<sup>22</sup>.

The ring of the Epano Kastro was found in an excavation layer which can be dated with certainty to the middle of the 13th – early 15th century<sup>23</sup>. Given the widespread use of the double-headed eagle throughout the Eastern Mediterranean, it is not easy to establish the identity of its owner. However, taking into account that the Epano Kastro was under Venetian rule and that this was a ring with symbolic decoration, probably made by a workshop that was in contact with contemporary Italian goldsmith works, it is more likely that it belonged to a Venetian official, or even the commander of the castle, without dismissing the possibility that it was owned by a local nobleman of Greek origin<sup>24</sup>.

Four more finger rings, made of silver and copper alloys, retrieved from the western cistern, are preserved

in a fragmentary state and thereby confirm that they had been disposed of (2004-M7, 2004-M10, 2004-M11, 2004-12) (maximum dimension: 2.8 cm, average diameter of the bezel: 1.3 cm) (Figs 4-7). In one case, only part of the bezel and the shoulder are maintained (Fig. 4). In the other three cases, the bezels are intact but the hoops are distorted and their segments are cut off (Figs 5-7).

All four rings have a simple typology with flat, oval-shaped bezels. In two cases, the bezels are undecorated or bear rudimentary linear engravings<sup>25</sup> (Figs 4-5). The bezels of the other two rings are decorated with cruciform engravings and supplementary linear designs<sup>26</sup> (Figs 6-7).

<sup>25</sup> Similar rings were widespread in Greece and the Balkans during the Middle Ages. Indicatively, E. Barmparitsa, *Η μαρτυρία των μεταλλικών αντικεμένων από τα κάστρα Χλεμούτοι, Γλαρέντζα και άλλες θέσεις της φραγκικής Ηλείας*. Όψεις της ζωής των Φράγκων του πριγκιπάτου της Αχαΐας, αδημοσίευτη διδακτορική διατριβή (unpublished PhD), Athens 2014, 146-147. P. Diaconu – S. Baraschi, *Păcuiul lui Soare. 2. Așezarea medievală (secolele XIII-XV)*, II, Bucureşti 1977, figs 95.25, 96.5-10, 96.13-15. M. Popović, *The Fortress of Ras/Tvrđava Ras*, Belgrade 1999, 245 fig. 203.11,13. Bikić, *Vizantijski nakit u Srbiji*, op.cit. (n. 20), 170-171, 92 fig. 60.1, 94 fig. 63.5. See also, T. Yashaeva – E. Denisova – N. Ginkut – V. Zalesskaya – D. Zhuravlev, *The Legacy of Byzantine Cherson: 185 Years of Excavation at Tauric Chersonesos*, Austin 2011, 481 no. 115, fig. 190.115.

<sup>26</sup> Bikić, *Vizantijski nakit u Srbiji*, op.cit. (n. 20), 93 fig. 61.1, 117 fig. 89.1,4.

The rings were found together with a denier tournois of the Prince of Achaea, Florence de Hainault (1289-1297)<sup>27</sup>. However, they belong to a broader excavation layer of a backfill with *terminus ante quem* the early 15th century<sup>28</sup>. Therefore, they most probably already existed in the late 13th century and within the span of approximately a century they were used until they became deformed and were then disposed of.

A copper alloy finger ring (2009-M1) (diameter: 2.1 cm, bezel width: 0.7 cm) has a similar typology with the above and was found in a relatively superficial layer at the entrance of a house across the small church (House A). The House A dates to 1552, based on a Venetian inscription found near its doorway<sup>29</sup>. The ribbon-shaped hoop of the ring is smoothly integrated into a slightly flattened undecorated bezel.

A survey carried out to the east of the complex of

<sup>27</sup> Kontogiannis – Arvaniti, «Placing “Contexts” in a Context», op.cit. (n. 13), 256-257.

<sup>28</sup> See above, page 404.

<sup>29</sup> For House A, Deliyianni-Doris – Michaelides, «Νεότερα από τις ανασκαφές στο Επάνω Κάστρο της Άνδρου το 2008», op.cit. (n. 1), 93, fig. 10. Deliyianni-Doris, «Οι ανασκαφές το 2009 και 2010», op.cit. (n. 1), 35-36, fig. 1-2. Deliyianni-Doris et al., «Ερευνα και ανασκαφή στο Επάνω Κάστρο Άνδρου», op.cit. (n. 1), 273-276, fig. 5.

cisterns revealed a copper alloy ring with broad hoop which becomes wider at the intersections with the bezel (2006-M2) (diameter of hoop: 1.9 cm, diameter of bezel: 0.9 cm) (Fig. 8). The bezel bears a circular cavity with a rock crystal, held in place by four hooks. Similar rings are occasionally discovered at sites from the Late Middle Ages throughout the Peloponnese, the Balkans and Western Europe<sup>30</sup>. The ring from the Epano Kastro could also date to the Venetian period.

Rings were the most common pieces of jewellery. Wills and matrimonial contracts of the Late Byzantine period reveal that middle and upper class households usually had two to three rings made of precious metals. References to copper jewellery are characteristically absent from these documents, probably because they had a relatively small market value<sup>31</sup>. Consequently they were more widespread in almost all social strata, as the fact that they are frequently found in excavations also shows<sup>32</sup>.

### Items of Private Devotion

A small cast bronze pendant cross was found near the surface of the small church (2005-M1) (4×2.6 cm) (Fig. 9). It is preserved in a fragmentary condition and it is adorned with imprinted circled dots. A small Middle

Byzantine cross of unknown origin from the Tsolozidis collection<sup>33</sup>, as well as crosses of the 6th-7th century from the Holy Land<sup>34</sup>, the 6th-8th century from Asia Minor<sup>35</sup>, the 10th-12th century from the Serbian castle of Ras<sup>36</sup> and elsewhere<sup>37</sup>, are similar from the point of view of manufacture and typology. The decorative theme of the circled dot is very common and often found in cross pendants mainly of the Early and Middle Byzantine periods, in a variety of shapes<sup>38</sup>.

Fig. 9. Small church, superficial, bronze cross pendant (2005-M1), possibly Middle Byzantine period.

The cross is a cosmological symbol which predates the Christian era. As a symbol of the martyrdom of Christ it evolves into the main talismanic-apotropaic symbol of Christianity<sup>39</sup>. The decorative theme of the circled dot represents roughly the concept of the eye<sup>40</sup> and has talismanic-apotropaic properties in order to ward off the evil eye<sup>41</sup>. Regardless of its symbolism, the theme of the circled dot was widely used in miniature artifacts, especially during the Early and Middle Byzantine periods, due to its ease of replication. Apart from crosses, it is also found in jewellery, grooming paraphernalia

*Κατάλογος Μόνιμης Έκθεσης*, eds D. Athanasoulis – A. Vasileiou, Athens 2016, 67 no. 61 (Δ. Χατζηλαζάρου, S. Metaxas), 214 no. 341 (S. Metaxas), 214 no. 342 (Δ. Αθανασούλης, S. Metaxas). A mould for cross pendants decorated with the theme of the circled dot was excavated in Cherson and dates to the 9th-10th century, Yashaeva et al., *Cherson*, op.cit. (n. 25), 451 no. 50, fig. 169.50.

and dress accessories<sup>42</sup> as well as in a variety of household items<sup>43</sup> both in Byzantium and in Europe<sup>44</sup>.

It is not possible to establish a precise date for the cross from the Epano Kastro, as it was found in a superficial layer and has an ordinary decoration, which was especially prevalent in the Early and Middle Byzantine periods. The presence of older crosses in layers of the Late Middle Ages is not unusual, as they are items with talismanic properties, which in time evolved into heirlooms<sup>45</sup>.

A lead ampulla that was unearthed in the western cistern belongs to the same category of private devotional

Fig. 10. Complex of cisterns, western cistern, lead ampulla (2004-M1), late 13th century or later.

objects<sup>46</sup> (2004-M1) (height: 7 cm, diameter of the body: 4.7 cm) (Fig. 10). Both sides of the object bear medals with effaced representations of linearly depicted saints with halos. On one side, the letters reveal the figure of Saint Demetrios. The depiction on the back is unidentifiable.

Cast lead ampullas which usually have the representation of Saint Demetrios on one side are associated with Thessaloniki and are commonly named *koutrouvia* according to the written sources of the period. They are connected with the development of pilgrimage to the myrrh-gushing saints of Thessaloniki, Saint Demetrios and Saint Theodora, which began in the middle of the 12th century and was suspended when the Ottomans conquered the city in 1430<sup>47</sup>. The widespread dissemination

of this cult is evidenced by the large number of ampullas found today across the Balkan peninsula and in collections abroad<sup>48</sup>.

The Andros ampulla probably dates from the late 13th century and its linear decoration and the forms of the medals are summarily depicted, since it was mass produced in order to meet demand. Furthermore, it could be an indirect confirmation of the relocation of Greeks from northern Greece to the islands of Andros, Tinos, Mykonos and Syros between 1364 and 1413, as a result of the Turkish raids. In particular, Apostolos Vakalopoulos notes the close relationship, and even the dialectical affinity that existed between the residents of the Epano Kastro and Chalkidiki<sup>49</sup>. The myrrh ampulla could therefore have been brought by Orthodox Greeks of Chalkidiki as an heirloom of private devotion and a reminder of their place of origin.

## Dress accessories

Buckles and buckle components in a variety of shapes, made mainly from iron but also from copper alloys, are typically associated with articles of clothing. A large iron D-shaped buckle was found in the backfill layer of the western cistern and, according to the excavation data, can be dated to the middle of the 13th - early 15th century<sup>50</sup> (2004-M13) (maximum dimension: 6 cm) (Fig. 11). The type and material from which it was made is often found in the Late Middle Ages<sup>51</sup>. It probably

<sup>54</sup> Preliminary note. The numismatic data of the excavation are

(Fig. 12). Because of its small size (maximum length: 1.8 cm), the buckle was probably used as a shoe buckle or even in bags and small belts. Similar finds are known from archaeological layers across Greece, the Balkans and Western Europe and date from the 12th century onwards<sup>55</sup>.

A cast copper alloy buckle plate, found in House A together with a tornesello, is of particular interest (2009-M5) (2.8×2 cm) (Fig. 13). The object is elongated and curved at the end and remains disjointed, having lost its buckle frame and pin<sup>56</sup>. On the back it has three

currently under research. For the Venetian tornesello, A. M. Stahl, *The Venetian tornesello. Medieval Colonial Coinage* (American Numismatic Society. Numismatic Notes and Monographs 163), New York 1985, especially 67-70.

<sup>56</sup> The shape of the buckle was rather common during the Byzantine period, P. Orsi, «Byzantina Siciliae IV-VIII.», *BZ* 21 (1912), 199-201. Davidson, *Corinth XII*, op.cit. (n. 38), 273 no. 2221, pl. 115.

transverse circular holes for adjusting the belt. On the front, inside a linear oval frame, it bears semi-effaced engraved decoration, which probably depicts a lyre-shaped floral pattern. The conservation status of the object does not currently allow clearer conclusions<sup>57</sup>.

Two copper alloy plates that are preserved in a fragmentary state and come from a domestic complex to the east of the small church (Lower Neighbourhood)<sup>58</sup> are connected with straps.

The first was found in a layer of collapsed walls on the paved courtyard between two houses, together with one tornesello (2008-M7). It is an elongated ribbon-shaped plate with three holes for attaching it to a strap (2.9×1.3 cm) (Fig. 14). Its one end was probably attached to the frame of a small buckle through folding. Similar objects were very common throughout the Late Middle Ages<sup>59</sup>, and indicate a date in the Venetian period.

The second plate is ribbon-shaped and folded (2007-M41) (2×1.5 cm) (Fig. 15). Its long sides are decorated with a dotted pattern and it bears a hole in the middle of one side. It was probably placed at the endpoint of an object made of an organic material (e.g. leather strap) for protection against wear, and fastened with a pin, which today has been lost. As it is a superficial find, it is hard to establish the period from which it dates. However, similar finds became widespread during the Late Middle Ages<sup>60</sup>.

<sup>57</sup> Lyre-shaped floral decorative patterns are found on buckle plates since the Early Byzantine period, *Καθημερινή ζωή στο Βυζάντιο*, op.cit. (n. 37), 390-391, no. 478 (Σ. Γερογιώργη).

Copper alloy mounts usually decorated leather or fabric belts or related equipment (clothing, bags, shoes) and also protected them against wear. Their decorative effect was based on the repetition of the same type or the combination of different types of mounts usually

of Jerusalem (British Academy Monographs in Archaeology no. 10), Oxford 2000, 134, fig. 11.2.26.

made of the same metal<sup>61</sup>. Five such finds, four of which were derived from the domestic complexes (House A, Lower Neighbourhood) and the fifth from the back-fillings of the western cistern, are typologically varied and measure from 1.2 to 2.7 cm. Two of them have a circular head and an integral rivet for adjustment<sup>62</sup> (2004-M14, 2010-M4) (Fig. 16). The remaining three, one in the shape of a rosette<sup>63</sup> (2009-M22) (Fig. 17) and two almond-shaped ones<sup>64</sup> (2007-M5, 2009-M21) (Fig. 18), have a hole for the fixing pin.

A copper alloy clasp<sup>65</sup> was excavated together with two torneselli in a layer of collapsed Venetian houses (2007-M10) (length: 1.7 cm) (Fig. 19). By the 14th century, the use of strap loops, small buttons and cords became widespread as part of a trend for tighter garments, which originated in Western Europe and spread to the Latin States of the Eastern Mediterranean<sup>66</sup>.

Finally, a closed-type copper alloy bell was unearthed in House A together with one tornesello (2009-M16) (length: 2.4 cm, diameter of loop: 0.4 cm) (Fig. 20). Closed-type bells were either spherical or pear-shaped

with a plate that folded into the lower part to hold the bead. They were used as decorative extras for fastening woollen or cotton cloaks especially around the neck and on the sleeves. They were also hung on pets, hunting dogs and horses and were produced in abundance<sup>67</sup>.

## Conclusions

The small but representative collection of jewellery and dress accessories from the Epano Kastro of Andros suggests that its inhabitants were not unaware of the major clothing trends of the Late Middle Ages. Buckles, buckle components and decorative mounts were primarily associated with the extensive use of belts, which became

visible from the 14th century onwards as they were used to fasten the outer garments worn by men and women. The use of belts in combination with the other clothing items (clasp, bell) can be connected to a trend for tighter garments, which spread to the Eastern Mediterranean through Italy from the 14th century onwards<sup>68</sup>.

Recent studies on donor portraits in Latin-dominanted regions (Crete, Rhodes, Cyprus) suggest that dress was a signifier of social status and group identity as well as an expression of individual taste<sup>69</sup>. The attire of less affluent populations must have remained unchanged for a long time based on economic and practical needs.

Male and female attire from the period prior to the 16th century in the Cyclades is difficult to determine due to scanty textual and pictorial information. Because of the Venetian rule on Andros and the commercial transactions between its rulers and territories under Latin occupation (Crete, Negroponte) during the 14th and early 15th century, as revealed by written sources<sup>70</sup>, it may be assumed that Western items of clothing (most probably Italian), were introduced, at least among the upper social classes of the island. People of the higher ranks of the society of Andros, the Venetian officials or even the local aristocracy who maintained contact with the Venetians, could order textiles and pieces of clothing from abroad, especially Venice<sup>71</sup>. Besides, there

could be local imitations of fashionable imported textiles and clothes.

The Greek inhabitants of the countryside or those with less interaction with the Venetian authorities probably maintained the traditional Byzantine dress codes. Donor representations of the 13th century from Paros and Naxos reveal that the indigenous population, especially women, maintained strong ties with Byzantine clothing tradition<sup>72</sup>. onwards male and female costumes in Latin dominated regions slowly began to adopt more elements of Western fashion<sup>73</sup>. The trend can be detected in the fragmentary finds from Epano Kastro.

## Ελένη Μπαρμπαρίτσα

### ΚΟΣΜΗΜΑΤΑ, ΑΝΤΙΚΕΙΜΕΝΑ ΙΔΙΩΤΙΚΗΣ ΕΥΛΑΒΕΙΑΣ ΚΑΙ ΕΞΑΡΤΗΜΑΤΑ ΕΝΔΥΣΗΣ ΑΠΟ ΤΟ ΕΠΑΝΩ ΚΑΣΤΡΟ ΑΝΔΡΟΥ (13ΟΣ-16ΟΣ ΑΙΩΝΑΣ)

Το Επάνω Κάστρο ή κάστρο της Φανερωμένης βρίσκεται στο νοτιοανατολικό τμήμα της Άνδρου και, μαζί με το κάστρο της Χώρας (Κάτω Κάστρο) και το φρούριο του Μακροτάνταλου, κατασκευάστηκε από τους Βενετούς επικυρωδίαρχους του νησιού μετά το 1205. Το Εθνικό και Καποδιστριακό Πανεπιστήμιο Αθηνών, υπό τη διεύθυνση της επίκουρης καθηγήτριας Ελένης Δεληγιάννη-Δωρή, διεξήγαγε συστηματική ανασκαφή σε επίκαιρα σημεία της καστροπολιτείας στο διάστημα 2004-2010.

Τα κοσμήματα, τα αντικείμενα ιδιωτικής ευλάβειας και τα εξαρτήματα ένδυσης από την έρευνα στο Επάνω Κάστρο είναι 26 στον αριθμό και τα περισσότερα από αυτά χρονολογούνται, με βάση τα ανασκαφικά δεδομένα και κυρίως τα νομισματικά συνευρήματα, στην περίοδο της βενετοκρατίας στο νησί (1205-1566). Στην πλειονότητά τους είναι κατασκευασμένα από κράματα χαλκού.

Κατά μήκος του βόρειου τμήματος των τειχών του

Επάνω Κάστρου βρίσκεται συγκρότημα δυο μεγάλων δημιόσιων στερνών. Η δυτική στέρνα δέχτηκε επιχώσεις από υλικό προερχόμενο από τον παρακείμενο μεσαιωνικό οικισμό, για να ξαναχρησιμοποιηθεί ως χώρος εγκατάστασης ή εργαστηρίου σε μεταγενέστερη εποχή. Από τη στέρνα αυτή προέρχονται, μεταξύ άλλων, πέντε δακτυλίδια, ένα φιαλίδιο μύρου, μια μεγάλη σιδερένια πόρπη και ένα διακοσμητικό καρφίδιο. Το νεότερο χρονικά εύρημα της επίχωσης ανάγεται στο διάστημα 1414-1423 και είναι ένα tornesello του δόγη Mocenigo Gradenigo.

Ιδιαίτερο ενδιαφέρον παρουσιάζει ένα ανδρικό χρυσό δακτυλίδι με παράσταση δικέφαλου αετού. Δεδομένης της μεγάλης διάδοσης του δικέφαλου αετού στον χώρο της ανατολικής Μεσογείου κατά τον ύστερο Μεσαίωνα, δεν είναι εύκολο να προσδιοριστεί η ταυτότητα του κατόχου του. Η τυπολογία και η απόδοση του δικέφαλου αετού παραπέμπει σε επαρχιακό εργαστήριο, εξοικειωμένο με έργα του βενετικού

γοτθικού ρυθμού. Λαμβάνοντας επιπλέον υπόψη ότι το Επάνω Κάστρο τελούσε υπό βενετική διοίκηση και ότι το δακτυλίδι εφερε συμβολική διακόσμηση, θα μπορούσε να αποδοθεί με περισσότερες πιθανότητες σε Βενετό αξιωματούχο ή ακόμη και στον διοικητή του κάστρου, χωρίς ωστόσο να μπορεί να αποκλειστεί η κατοχή του από κάποιον τοπικό άρχοντα ελληνικής καταγωγής.

Τέσσερα δακτυλίδια από κράμα χαλκού με ασήμι, που προέρχονται από τον χώρο της δυτικής στέρεων, είναι ακόσμητα ή φέρουν σταυρόσχημες εγχαράξεις και διατηρούνται αποσπασματικά επιβεβαιώνοντας τον χαρακτήρα της απόρριψης. Δυο ακόμη χάλκινα δακτυλίδια, το ένα με ακόσμητη πεπλατυσμένη σφενδόνη και το δεύτερο με ένθετη διακόσμηση από ορεία κρύσταλλο, ανάγονται στην περίοδο της βενετοκρατίας.

Ενδιαφέρον παρουσιάζει ένας μικρός χάλκινος σταυρός-εγκόλπιο, που βρέθηκε επιφανειακά κατά την ανασκαφή μικρού ναΐσκου, διατηρείται αποσπασματικά και καλύπτεται με έκτυπη διακόσμηση με κύκλο και στιγμή στο κέντρο. Ο τύπος του σταυρού και ο τρόπος διακόσμησής του κυριαρχούν ιδιαίτερα κατά την πρώιμη και μέση Βυζαντινή περίοδο. Το θέμα του κύκλου με τη στιγμή στο κέντρο αποδίδει αφαιρετικά την έννοια του οφθαλμού και συνδέεται ενδεχομένως με αποτροπαϊκές αντιλήψεις προστασίας από τον βάσκανο οφθαλμό.

Ένα φιαλίδιο μύρου από το προσκύνημα του Αγίου Δημητρίου Θεσσαλονίκης προέρχεται από τις επιχώσεις της δυτικής στέρεων και χρονολογείται πιθανότατα από τα τέλη του 13ου αιώνα. Θα μπορούσε να θεωρηθεί έμμεση επιβεβαίωση της μετεγκατάστασης Ελλήνων από τη βόρεια Ελλάδα στα νησιά Άνδρο, Τήνο, Μύκονο και Σύρο μεταξύ των ετών 1364 και 1413, εξαιτίας των τονοχικών επιδρομών. Ο Απόστολος Βακαλόπουλος σημειεύει ειδικότερα τη στενή σχέση και μάλιστα τη διαλεκτική συγγένεια που υπάρχει μεταξύ των κατοίκων της περιοχής του Επάνω Κάστρου και της Χαλκιδικής. Η ευλογία μύρου, επομένως, θα μπορούσε να είχε μεταφερθεί από ορθόδοξους Έλληνες της Χαλκιδικής ως οικογενειακό κειμήλιο ιδιωτικής ευλάβειας και ανάμνησης του τόπου καταγωγής.

Πόρπες και εξαρτήματα πορπών σε ποικιλία σχημάτων συνδέονται κατά κανόνα με την ένδυση. Μια μεγάλη σιδερένια πόρπη σε σχήμα γράμματος Δ θα

αξιοποιείτο σε ανδρικά ζωνάρια που δένονταν χαλαρά στους γοφούς, χωρίς να αποκλείεται η χρήση της στη στερεόση της ιπποσκευής. Σιδερένια οκτώσχημη πόρπη χρησιμοποιείτο πιθανόν σε υποδήματα ή σακίδια εξαιτίας του πολύ μικρού μεγέθους της. Ιδιαίτερο ενδιαφέρον παρουσιάζει ένα χάλκινο χυτό εξάρτημα πόρπης, με ημιεξίτηλη εγχάρακτη διακόσμηση, που πιθανόν αποδίδει λυρόσχημο φυτικό κόσμημα.

Χάλκινα χυτά καρφίδια διακοσμούσαν συνήθως δερμάτινα ή υφασμάτινα ζωνάρια ή συναφή εξοπλισμό (ρούχα, σάκους, υποδήματα) προστατεύοντάς τα παράλληλα από τη φθορά. Το διακοσμητικό τους αποτέλεσμα βασιζόταν στην επανάληψη του ίδιου τύπου ή στον συνδυασμό διαφόρων τύπων καρφιδίων κατά κανόνα από το ίδιο μέταλλο.

Μια κόπιτσα και ένα κουδουνάκι εντάσσονται, πιθανόν, σε μια τάση για περισσότερο εφαρμοστά ρούχα, η οποία διαμορφώθηκε στη δυτική Ευρώπη κατά τον 14ο αιώνα και διαδόθηκε σταδιακά στα λατινικά κρατίδια της ανατολικής Μεσογείου.

Η μικρή αλλά αντιπροσωπευτική συλλογή κοσμημάτων και εξαρτημάτων ένδυσης από το Επάνω Κάστρο υποδηλώνει ότι οι κάτοικοι του δεν αγνοούσαν τις κύριες ενδυματολογικές τάσεις του ύστερου Μεσαίωνα. Πόρπες, εξαρτήματα πορπών και διακοσμητικά καρφίδια συνδέονταν κατά κύριο λόγο με την εκτεταμένη χρήση ζωναριών, που από τον 14ο αιώνα γίνονται πλέον εμφανή. Η χρήση της ζώνης σε συνδυασμό με τα υπόλοιπα στοιχεία ένδυσης (κόπιτσα, κουδουνάκι) μπορεί να συνδεθεί με μια τάση για περισσότερο εφαρμοστά ενδύματα, που διαδόθηκε στην ανατολική Μεσόγειο μέσω της Ιταλίας από τον 14ο αιώνα και εξής. Η βενετική επικυριαρχία της Άνδρου και οι γνωστές από τις γραπτές πηγές εμπορικές συναλλαγές των γηγεμόνων της με λατινοκρατούμενες περιοχές (Κρήτη, Νεγροπόντε) κατά τον 14ο αιώνα, επιτρέπουν να υποθέσουμε την παρείσφρηση δυτικών, πιθανότατα ιταλικών, ενδυματολογικών στοιχείων, τουλάχιστον στις ανώτερες κοινωνικές τάξεις του νησιού, των Βενετών αξιωματούχων ή ακόμη και της τοπικής αριστοκρατίας που διατηρούσε επαφές με τους Βενετούς.
