On the Hypothetical Model of Childbearing Iconography in the Octateuchs

Mati MEYER

Τόμος ΚΣΤ' (2005) • Σελ. 311-318
ΑΘΗΝΑ 2005
ON THE HYPOTHETICAL MODEL OF CHILDBEARING ICONOGRAPHY IN THE OCTATEUCHS*

The Byzantine iconography of childbearing, featured essentially in the eleventh- to thirteenth-century Octateuchs and in the only extant copy of the Book of Kings, Vat. gr. 333, represents two different schemas: one, a 'realistic rendering', as labeled by Kurt Weitzmann and Massimo Bernabò, was used in certain scenes of childbearing, drawing on an unidentified illustrated medical treatise; the other, 'l'enfancement sans douleur', as coined by Jacqueline La-fontaine-Dosogne, is related to the birth of the Virgin and was adapted for other biblical scenes of birth. We shall argue below that the Octateuch does not present two unrelated schemas of childbearing, but rather one abridged iconography of the pre- and post-partum stages originating in its archetype. We shall also suggest that the source of this specific iconography is a now lost illustrated manuscript of the Gynaikia, yet is still traceable in Western illuminated manuscripts.

The  $\Gamma\nu\nu\alpha\lambda\iota\sigma\tau\alpha\mu\iota\varsigma$ ($\Gamma\nu\alpha\iota\kappa\iota\alpha\epsilon\iota$, or Ποτὶ γυναικείων παθῶν ($On$ Women's Diseases),) is an obstetrical and gynaecological treatise written by the second-century physician Soranus of Ephesus. It is the first medical work to formulate a rational gynecology for midwives. Soranus was a prolific writer who was held in high esteem in the Byzantine world, and fragments of his works were frequently copied. Although his Gynaikia in Greek has been preserved only fragmentarily, it was reconstructed from extant Medieval Latin adaptations, which had also attained similar acclaim. Avianus Vindicianus (4th c.); Caelsius Aurelianus (5th c.); and the anonymous Muscion or Mustio (6th c.) published a new Byzantine 'translation' from Soranus undoubtedly acquired his medical knowledge and obstetrical techniques in Alexandria, but practiced mainly in Rome (98-138 A.D.) among the aristocratic families (A.E. Hanson and M.H. Green, Soranu of Ephesus: Methodicorum princeps, ANRW 37/2, 1994, 981-82) (hereafter: Soranus). D. Goarévitch, La gynécologie et l'obstétrique, ANRW 37/3, 1996, 2085-86.

12 This is the most faithful Latin translation of Soranu's original text (Caelsius Aurelianus, Gynaeciae: Fragments of a Latin Version of Soranu's Gynaecia from a Thirteenth Century Manuscript, M.F. Drabkin and I.E. Drabkin, eds., Baltimore 1951).
13 Mustio, i.e. Sorani gynaeciorum vetus translatio Latina, V, Rose, ed., Leipzig 1882. See also G. Baader, Der Hebsammenkatechismus des

311
the Latin version of the *Gynaecia Muscionis*, a text conflated with that of the Byzantine physician Aetius of Amida (510-574) in his *Book XVI*. Later, Aetius’ treatise, Μοσχίωνος περί τῶν γυναικείων παθῶν, is mentioned by Photios, Patriarch of Constantinople (858-867, 877-886). The theory maintained by modern scholarship, that Soranus’ original treatise was abundantly illustrated, is significant to our argument. In the fifteenth-century Parisinus gr. 2153, which contains various writings of Soranus and Aetius of Amida (a copy of an earlier manuscript of an unknown date), the artist shares with his readers the reason why he left six folios empty between Chapters 44-45: “Here one has to insert each one of the pictures of the manipulation of fétuses and how the *maia* helps to push out each one with the explication of a picture. We have renounced [reproducing the schemas] because [of the missing] colors.” If this remark is genuine, then the empty folios should have contained polychrome drawings resembling those appearing on the ninth-tenth-century Bruxellensis 3714, a copy of a sixth-century Latin adaptation of Muscion’s *Gynaikèia*, depicting clinical illustrations of *fetus-in-utero*. What is more, the sixth-century manuscript maintains that it would be pointless to include some of the illustrations that existed in the Soranus’ original manuscript. The casualness of this remark suggests that the illustrations in the Greek original were so abundant that the抄写员 could be selective about which pictures he wished to incorporate into the Latin version.

The *Gynaikèia* comprises four books. Book II, written for the midwife, deals with the uncomplicated delivery occurring in ideal conditions; Soranus instructs the midwife on the young mother’s delivery and mental well-being; further on, he explains the post-partum stages, dispensing useful instructions on how to care for the young mother and the newborn.

A comparison between the medical text and the ‘realistic’ schema of birth, which presents visual elements hitherto unquestioned, may furnish clues that could support our argument regarding the hypothetical model of childbirth.

The Byzantine illustrations always show the young mother against an architectural background, a Byzantine convention for depicting an interior setting. She is clad in a short, lightweight tunic drawn above her knees; her distended belly and heavy breasts, free of the usual constraining band, indicate that she is pregnant. Although she usually wears a headdress – a *paenula* or a *phylakolion* – which is a visible sign of young mother’s delivery and mental well-being; further on, he explains the post-partum stages, dispensing useful instructions on how to care for the young mother and the newborn.

The Byzantine illustrations always show the young mother against an architectural background, a Byzantine convention for depicting an interior setting. She is clad in a short, lightweight tunic drawn above her knees; her distended belly and heavy breasts, free of the usual constraining band, indicate that she is pregnant. Although she usually wears a headdress – a *paenula* or a *phylakolion* – which is a visible sign of
her marital status\textsuperscript{25}, or white bands, her hair is dishevelled\textsuperscript{26}. All these features are illustrated in the depiction of Rachel in Vat. gr. 747, fol. 56v (Fig. 1) and Lot’s daughter in Vat. gr. 746, fol. 77v (Fig. 2). The parturient, facing front, is seated on a bench (designating the birthing stool of late antique imagery)\textsuperscript{27}, or crouching, her legs wide apart, pressing one hand against her uterus and the other on the midwife’s head; both gestures indicate labor pain, as exemplified by the figure of Rebecca giving birth in Vat. gr. 747, fol. 46v (Fig. 3). The midwife, seated on the ground or on a low stool beside the parturient, usually on her right (Fig. 2), supervises the infant’s egress. The woman depicted is giving birth to one or two infants; one is represented ‘plunging forward’, head first, from his mother’s legs, while the other appears lying on the ground; alternatively, the newborn is shown lying on a sort of couch in front of his mother or at her side (Fig. 1). The ancient custom of giving birth at home, which is illustrated in the miniatures, is mentioned by Soranus\textsuperscript{28}. The lightweight garment of the parturient and her dishevelled appearance are also echoed in the text, where the physician encourages the midwife to let the woman act according to her whims, even if this may seem bizarre, in order to ease her labor pain:

\textquote{... for the unhindered passage of the breath, it is necessary to loosen their [parturients] girdles as well as to free the chest of any binder, though not on account of the vulgar conception according to which womenfolk are unwilling to suffer any fetter and thus \textit{also} loosen the...}

\textsuperscript{25} The headdress may be understood as a later addition, since Byzantine decorum demanded the married woman’s head to be covered (L. Garland, The Life and Ideology of Byzantine Women: A Further Note on Conventions of Behaviour and Social Reality as Reflected in Eleventh and Twelfth Century Historical Sources, Bye 58 (1988), 371).

\textsuperscript{26} A close depiction, where the woman about to deliver is crouching and pulling at her dishevelled hair, appears in the tenth-century Kynegetica of Oppian, a copy of a pre-iconoclastic model. The violent gesture signifying the labor pain corresponds with the legend \textit{γυνὴ ώδινουσα} (‘woman in painful birth’) accompanying the miniature (Venice, Bibl. Marc., cod. gr. Z. 479 [=881], ca. 1002, fol. 14r, Kynegetica of Oppian, I: 468-479 (I. Furlan, Codici greci illustrati della Biblioteca Marciana, Padova 1988, vol. V, 32, fig. 26).

\textsuperscript{27} See, for example, the second-century terracotta relief from the tomb of the midwife Scribonia Attica Amerino in the cemetery of Isola Sacra in Ostia, preserved in the local museum, where the parturient is seated on just such a chair (G. Calza, \textit{La necropoli del Porto di Roma nell’Isola Sacra}, Rome 1940, 248-49, fig. 148). The seated position is equally mentioned in a sepulchral epigram by Agathias Scholastus, c. 532-d. c. 580 (\textit{Anthologiae graecae} VII, no. 583 (=The Greek Anthology, W.R. Paton, ed., London-New York, 1935, vol. II, 312).

\textsuperscript{28} Sor., Gyn. II.i.2 (67)-II.iii.4 (67-68) (Temkin, Soranus’ Gynecology, 70-71).
hair; it is rather for the above-mentioned reason that even loosening the hair possibly effects good tonus of the head\textsuperscript{30}

When labor begins, the parturient should be seated on the birthing stool next to the midwife\textsuperscript{31}. As we have seen, Rebecca is pressing down on her uterus (Fig. 3), a gesture exhibiting the need to activate the uterus at the moment of delivery, as Soranus puts it: "And the servants standing at the sides should softly press the mass down towards the lower parts with their hands"\textsuperscript{32}. Moreover, the Greek doctor recommends that now "there should be three women helpers, capable of gently allaying the anxiety of the gravida even if they do not happen to have had experience with birth. Two of them should be at the sides and one behind holding the parturient woman so that she may not sway with <the> pains"\textsuperscript{33}. Though absent in the Octateuchs, both elements – the servants and the applied pressure – are present in the depiction of Rebecca giving birth in the sixth- or seventh-century Latin Ashburnham Pentateuch\textsuperscript{34}. Seated frontally on an obstetrical stool, her legs wide apart and assisted by a midwife kneeling before her, she is held down by two women; the one on the left supports her from behind with her left hand while pressing on the uterus with her right hand. The full schema of childbearing is also preserved in the miniature of a laboring woman in a thirteenth-century Latin compilation of ancient medical texts\textsuperscript{35}, wherein two women assist the parturient and a third stands behind the obstetrical stool, gently placing her right hand on the parturient’s left breast. The midwife, seated on a low stool on the right, is administering coriander seeds to the woman to induce her labor, as the text indicates\textsuperscript{36}. We should note the striking similarity between this midwife’s gesture toward the woman’s genitalia and that of the midwife assisting Lot’s daughter (Fig. 2), only here the midwife is seated on the left. Thus, it is reasonable to assume that since the copyist of the Octateuch drastically condensed the original four-female presence into one, he also had to transfer the bluntly realistic gesture of activating the uterus to the parturient.

As for the midwife, it seems that the Byzantine artist copying from the illuminated Gynaikia closely followed Soranus’ advice that the midwife should “sit down opposite and below the laboring woman; for the extraction of the fetus must take place from a higher towards a lower plane… the midwife, with legs parted and bending the left one forward a little to make it easy to work with the left hand, should sit down and, ... in front of the laboring woman”\textsuperscript{37}. The iconographic schema shows the midwife at the parturient’s side in profile, and not in front of her; the alteration may be due to the

ON THE HYPOTHETICAL MODEL OF CHILDBEARING ICONOGRAPHY IN THE OCTATEUCHS

Fig. 4. Sarah giving birth to Isaac, Rome, Lib. Apost. Vat. gr. 746, fol. 79r, c. 1150 (photo: Biblioteca Apostolica Vaticana).

Byzantine artistic inclination to make every element visible in the composition. When discussing the foetal positions, Soranus acknowledges that the head presentation with arms beside the legs is the only 'normal' one. This position, which was probably present in the original illustrated manuscript, as Pat. gr. 2153 attests, found its way into the Octateuchs, where it serves as the stock-type for the depiction of the 'realistic' birth. The portrayal of the infant lying beside his mother's side on a sort of couch can also be linked to Soranus, who instructs the midwife to prepare "a pillow that the infant may be placed upon it below the parturient woman, till the after-birth." The juxtaposition of the pre-partum stages described in Soranus' text and the iconographic elements of the 'realistic' birth allow us to conjecture that the Byzantine copyist, drawing on an illuminated Gynaikia, chose to condense the most significant elements that convey the multifaceted aspects of childbirth into one succinct image.

We shall now turn to the depiction of the 'painless birth', represented by an abridged Soranian post-partum formula. The young mother, resting on a large pillow placed on a bed set in front of a conventional building, wears a long tunic, her head covered by a pallia or paenula, and her face expressing exhaustion (see, e.g., Sarah after the Isaac's birth in Vat. gr. 746, fol. 79r; Fig. 4). The midwife, seated on the ground or on a low stool, bathes the newborn in a basin near the mother's bed, sometimes assisted by a servant. Alternatively, the baby may be depicted after his bath, hying swaddled in a cradle (see, e.g., Samson in Vat. gr. 746, fol. 490r; Fig. 5). One or two women approach the bed of the young mother, offering her food or presents.

In Book II of the Gynaikia, Soranus describes at length the post-partum stage, wherein the midwife should tend to both mother and infant. She is first to make sure that the young mother, who was scantily dressed, was now fully clad to keep warm, and resting. After the midwife established that the

---

37 This position of the parturient, the midwife, and others was reconstructed in the French edition of Soranus's Gynaikia based on the details furnished by the physician himself and by the extant iconography of childbirth (Soranus, Gynaikia, vol. II, 68-69, n. 73, n. 24, drawing 10). See also D. Gourévitch, La grossesse et l'accouchement dans l'iconographie antique, Dossiers de l'archéologie 123 (1988), 42-48.

38 The description of this position is missing from the Greek version of the Gynaikia due to a lacuna of 30 1/5 lines, but is cited in the translations of Caecilius Aurelianus and Muscio: "When the bag is sufficiently open, the head of the fetus is driven out next; for thus it is carried when nature fulfills her duty properly. And the birth is even more favorable since the bag is sufficiently open." (Soranus, Gynaikia, vol. II, 15). The passage on "What is the Care of the Woman after Labor" does not appear in Temkin's version.

39 See above, n. 16.

40 Sor. Gyn. II.ii.2 (67) (Temkin, Soranus' Gynecology, 70).

41 The following female figures, with slight differences, are depicted according to this schema: 1. Enoch's mother (Vat. gr. 747, fol. 26r; Ser., fol. 50v; Sm., fol. 17r; Vat. gr. 746, fol. 46r (Gen. 4:17; Weitzmann and Bernabò, Octateuch, 45, figs 107c-110c). 2. Sarah, Isaac's mother (Vat. gr. 747, fol. 42r; Sm., fol. 33r; Vat. gr. 746, fol. 79r (Gen. 21:25; Weitzmann and Bernabò, Octateuch, 82, figs 288b-291b). 3. Yochebed, Moses' mother (Ser., fol. 156r; Sm., fol. 64r; Vat. gr. 746, fol. 152r (Ex. 2:1-2; Weitzmann and Bernabò, Octateuch, 144-45, figs 596-598). 4. Samson's mother (Vat. gr. 746, fol. 490r; Octateuch, Athos, Vatopedi Monastery, cod. 602, fol. 436r (Judg. 13:24; Weitzmann and Bernabò, Octateuch, 286, figs 1491-1492).

42 On the two women, see the depiction of Moses' birth (Ser., fol. 156r, Weitzmann and Bernabò, Octateuch, 144, fig. 596).

infant was worth rearing and severed the umbilical cord\textsuperscript{44}, the physician urged her to proceed without delay to bathe the newborn so as to remove the amniotic fluid from his body: “After having cleansed the body, one must bathe it with lukewarm water and wash away all the covering emulsion”\textsuperscript{45}. Ernst Kitzinger has argued that the Hellenistic motif of bathing the infant\textsuperscript{46} influenced illustrations in the early illuminated Bibles; these, in turn, were the source for the iconography of the New Testament, such as the Nativity\textsuperscript{47}, and were then used to depict the biblical birth appearing in the Octateuchs\textsuperscript{48}. Yet, our discussion suggests that the bath may have been introduced into the Octateuchs’ imagery via the full-cycle illustrated in the Gynaikēia rather than along the arduous route suggested by Kitzinger. Two miniatures display a conflation of the pre- and post-partum stages. A similar explanation can be suggested for the cradle appearing in several miniatures. Although it is stated that this element draws on the iconography of the birth of the Virgin from the twelfth century onward\textsuperscript{49}, the cradle already appears in the eleventh century Vat. gr. 747 on fol. 26r, in which the baby Henoch lies on a large pillow, with his head raised high (Fig. 6). This depiction accords Soranus’ instruction to put the swaddled newborn to bed\textsuperscript{50}, “... for instance upon a pillow filled with flock, or otherwise, with soft hay; and the mattress should be hollowed out like a channel, so that the newborn when put down should roll about. And the little head should be placed in a somewhat raised position...”\textsuperscript{51}. Therefore, we cannot dismiss the possibility that the Byzantine artist replaced the various bed supports mentioned in Soranus’ text with the cradle in order to incorporate an everyday item and thereby render a realistic atmosphere in the confinement room\textsuperscript{52}. It seems, then, that both stages – the infant’s bath and the swaddled baby placed on a bed support – were illustrated in the Gynaikēia and that the biblical scenes already in the sixth century, as for example in the scene of Potiphar’s wife in the Vienna Genesis (Gen. 39: 9–13; Vienna, Österreichische Nationalbibliothek, theol. gr. 31, fol. 16r (sixth century)). H. Gerstinger, Die Wiener Genesis, Vienna: Fiber, 1931, 156, pl. 31); or scenes of the Nativity from the seventh century on, as exemplified in the mosaic of the Oratory of Pope John VII in the ancient church of St. Peter in Rome (Nordhagen, Origien des Washing, op.cit., 326).

\textsuperscript{50} Sor. Gyn. II.ix.14 (83) (Temkin, Soranus’ Gynecology, 84-85).

\textsuperscript{51} Sor. Gyn. I.I.x.16 (85) (Temkin, Soranus’ Gynecology, 87).

\textsuperscript{52} A small couch for receiving the newborn baby, Alexis I Komnenos, probably designating a cradle, is mentioned in an unpublished sermon delivered by the carpophylax Samuel Mavropous on Lent 1180 (P. Magdalino, The Empire of Manuel I Komnenos, 1143–1180, Cambridge [U.K.] 1993, 243, n. 46). The insertion of rea1is into the biblical scenes of childbirth is not altogether surprising. Thus, for example, the presence of one or more young women bringing food or presents to the mother, drawing its iconography from Classical source, was convincingly anchored in the contemporary imperial custom of aristocratic women to pay homage to the empress after giving birth by bringing her presents (Constantin VII Porphyrogennetus, De cer. II, 21, Reiske, ed., Bonn, vol. I, 618). For the discussion of this element, see Lafontaine-Dosogne, Iconographie de l’enfance, vol. I, 97; S. Dufrenne, A propos de la naissance de David dans le Ms. 3 de Dumbarton Oaks, TM 8 (1981), 126; Der Nersessian, Dumbarton Oaks Psalter, op.cit. (n. 43), 166.

Harrison, Prolegomena to the Study of Greek Religion, New York 1955, 546-48; M.G. Parani, Reconstructing the Reality of Images. Byzantine Material Culture and Religious Iconography (11th-12th Centuries), Leiden and Boston 2003, 192-93, n. 198), the cradle appears in
The discussion of the ‘painless birth’ schema shows clearly that it is portraying the post-partum stage described in Soranus’ Book II and is harmoniously completing the pre-partum stage amply illustrated in Vat. gr. 747, the closest manuscript to the Octateuch’s archetype. The birth of Ben-Ammi, conflating both schemas into one continuous unit, is a case in point. On the left side of the miniatures, Lot’s daughter undergoes labor while seated on a bench, her left hand pressing down on her uterus – pre-partum elements; on the right side, Moab, the first-born, is lying in a cradle attended by the second daughter – a post-partum detail.

Our discussion of the hypothetical model of the iconography of childbearing in the Octateuchs suggests that the archetype drew specifically from a copiously illuminated manuscript of Book II of Soranus’ Gynaikeia, reducing the entire iconographic formula to its most basic elements without diminishing from the scene’s significance. This conclusion is corroborated by the extant Latin manuscripts illuminating the Cynaecia.

This supposition, on the one hand, challenges the widely accepted theory that the Octateuchs employ two independent iconographic formulas; on the other, it suggests a possible model for both ‘realistic’ and ‘painless birth’ iconography. If our hypothesis is sound, then one has to look for the origin of the biblical iconography of childbearing in the Soranian model, rather than in the New Testament iconography that, as modern scholarship maintains, was rerouted to the Octateuchs.

ΤΟ ΕΙΚΟΝΟΓΡΑΦΙΚΟ ΠΡΟΤΥΠΟ ΤΩΝ ΣΚΗΝΩΝ ΓΕΝΝΗΣΗΣ ΣΤΙΣ ΟΚΤΑΤΕΥΧΟΥΣ

Στην παρούσα μελέτη εξετάζεται το θέμα του υποθετικού προτύπου που πιστεύεται ότι επηρέασε την εικονογραφία σκηνών που αναφέρονται στη γέννηση, στις Οκτατεύχους. Αποφασίζεται η γενική αποδεκτή άποψη ότι η εικονογραφία στηρίζεται σε δύο διαφορετικούς τύπους, έναν «φασιστικό» και έναν «εκχριστιανισμένο», που αναγόνται σε διαφορετικές πηγές και εποχές, και διατυπώνεται η υπόθεση ότι πρόκειται για ένα σχήμα με δύο υπόλοιπα, στο οποίο εικονίζονται διαδοχικές φάσεις της γέννησης, ο τοκετός και οι διαδικασίες μετά τον τοκετό.

Υποστηρίζεται ότι η εικονογραφία ανάγεται στο σύγγραμμα του Σωρανού Γυναικείων, μία πραγματεία μαιευτικής και γυναικολογίας που σκοπό είχε να μυθίσει τις μαίες στα μυστικά του επαγγέλματος τους. Πιθανώς υπήρχαν εικονογραφημένα χειρόγραφα της Βίβλου στην άποψη ότι εικονογραφημένα αντίγραφα των Γυναικείων κυκλοφόροσαν στη λατινική Δύση στην ύπαρξη δύο χειρογράφων (ενός λατινικού και ενός ελληνικού) που περιέχουν εικονογραφημένα τμήματα αυτής της πραγματείας, καθώς και μία μνεία στη Βιβλιοθήκη του Φωτίου (9ος αι.).

Η μελέτη της εικονογραφίας σκηνών γέννησης στις Οκτατεύχους οδηγεί στην υπόθεση -αρκετά πειστική- ότι η εικονογραφία βασίζεται συγκεκριμένα σε ένα χειρόγραφο των Γυναικείων του Σωρανού, κατά πάσα πιθανότητα εικονογραφημένο, και ότι ο αντιγραφέας πρόκειται να διατηρήσει τα σενάρια της σκηνής χωρίς να μειώσει τη σαφήνεια της σκηνής.
