ABSTRACT

Twenty two species of Thysanoptera found on 29 species of plants in three counties of Northern Greece are listed. For two thirds of them these are the first records for the region. Four of them: *Aeolothrips versicolor* Uzel f. *similis* Priesner, *Kakothrips dentatus* Knechtel, *Stenothrips graminum* Uzel and *Thrips fuscipennis* Haliday are new for the Greek fauna.

Introduction

In late May 1984, the authors had the opportunity to collect Thysanoptera in five locations of northern Greece: 1) 10 Km south of the city of Thessaloniki (marked Thessaloniki), 2) Vasilika, approximately 20 Km southeast of the city of Thessaloniki, 3) Gerakini, in coastal Halkidiki, 4) Polygyros, in hilly Halkidiki, and 5) near the town of Naoussa in the county of Imathia (marked Naoussa). The specimens collected were placed partly in the collection of the Zoological Department of the Hungarian Natural History Museum and partly in the collection of the Laboratory of Applied Zoology and Parasitology of the Faculty of Agriculture of the University of Thessaloniki. Lists of the Thysanoptera occurring in Greece have been presented by Jacot-Guillarmod (1970, 1971, 1974, 1975, 1978), Kourmadas et al. (1982), Pelekassis (1962), Pitkin (1972), Priesner (1964), Schliephake (1983) and zur Strassen (1977, 1979). There are further data under publication by zur Strassen (personal communication).

ΠΕΡΙΛΗΨΗ

Δίνονται τα ονόματα 22 ειδών Θυσανοπτέρων που βρέθηκαν σε 29 είδη αυτοφυών και καλλιεργούμενων φυτών στις περιοχές Μίκρας και Βασιλικών Θεσσαλονίκης, Πολυγύρου και Γερακινής Χαλκιδικής και Νάουσας Ημαθίας. Τα δύο τρίτα των ειδών αυτών αναφέρονται για πρώτη φορά στην περιοχή αυτή και τέσσερα, τα: *Aeolothrips versicolor* Uzel f. *similis* Priesner, *Kakothrips dentatus* Knechtel, *Stenothrips graminum* Uzel και *Thrips fuscipennis* Haliday είναι νέα για την Ελληνική πανίδα.
