**Table S1.** The full dataset regarding the spiny lobster records from the Red Fish Project. The provided data regard the region, area with coordinates, and depth of each record. Further data regarding the observer along with the habitat type, based on the National scheme, and the ecozone are also provided.

\*According to the National Habitats Monitoring Programme (Directive 92/43 EC)

1110\_B: biocommunities of coarse-grained sandbanks with gravel, with strong bottom currents, presence of "maërl" (deeper waters – lower infralittoral and circalittoral zones).

1170\_A: biocommunities of rocky substrates of upper infralittoral zone

1170\_B: biocommunities of rocky substrates of the lower infralittoral zone and circalittoral zone to the ends of the continental shelf break

8330: Submerged or partially submerged sea caves

<sup>2\*</sup> Upper infralittoral: 0-20 m

<sup>3\*</sup> Lower infralittoral: 20-40 m

<sup>4\*</sup> Upper circalittoral: 40-80 m

<sup>5\*</sup> Lower circalittoral - End of continental shelf break 80-200 m
