

Range expansion or residency? First record of a potentially stable population of *Dentex maroccanus* in the central Adriatic Sea

Federico CALÍ, Martina SCANU, Gabriele ACHILLE, Giorgio VIANSON, and Alessandro LUCCHETTI

Mediterranean Marine Science, 26 (4) 2025

Table S1. Mean and Standard Deviation of Gonadosomatic Index (GSI) values for Morocco dentex individuals by sex and macroscopic maturity stage. N = number of individuals.

Macroscopic maturity stage	Sex	GSI mean	GSI SD	N
1-Immature	F	1.01	0.35	12
	M	0.23	-	1
2-Maturing	F	1.50	0.35	7
	M	0.26	0.13	11
3-Ripening	F	-	-	-
	M	0.51	0.18	12
4-Ripe	F	-	-	-
	M	-	-	-
5-Spent	F	-	-	-
	M	-	-	-

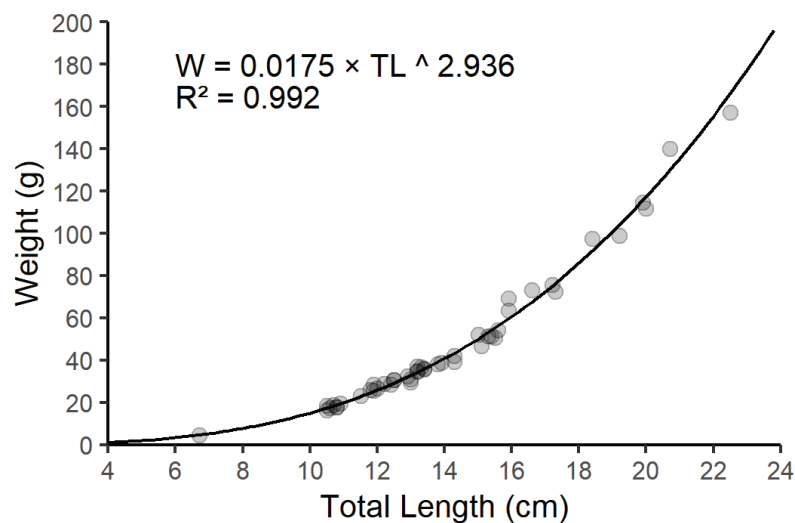

Fig. S1: Length-weight relationship for Morocco dentex individuals caught in the central Adriatic Sea (N = 47).
